

Swiss narrow gauge

Main signals of Swiss railways

Prototype:

The **main-signal** is found on every RhB station, as well as on the line.

The main-signal has 3 lights. You can signal as prototype can do too:

- green
- red
- yellow

Other Swiss railway companies do use these signals, or most similar ones, too.

Model:

structure: brass

delivery: ready-to-run

construction: Micro-Scale

Installation:

measure for installation: 4,0 x 10,5 mm

depth for installation: 27,5 mm

tension: 12 Volts DC

Technical description:

Signal is ready-to-run. At the downside of the signal mast, you can solder the wire for lightning. Every lamp is a LED (light emitting diode). The necessary resistor is wired already.

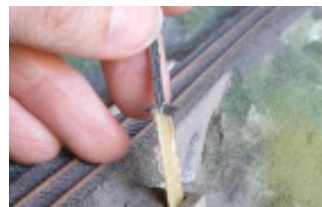

We get these excellent signals from Micro-Scale (www.microscale.ch). Please have a look at their web-site for further information.

Accessories:

Signal code table (included).

Instructions:

1. drill hole into layout
2. solder wire at the bottom, enter electric into hole
3. straighten signal mast, fixture
