

Swiss narrow gauge – Rhaetian Railway

RhB – gondola Kk-w 7301 - 7330

Details from brakes and stakes

Prototype:

From the beginning of railroading in Graubünden, the Rhaetian Railway had a lot of two-axled freight wagons. These were no more state of the time in the 1970-ies, when RhB decided, to rebuild them. The chassis from 1911 was kept, the superstructure was rebuilt. New sidebars from aluminium and stakes came to the wagon, the chassis was modernised. The rebuilt vehicles could be added to freight trains, which run up to 70 km/h. Some of the wagon were rebuilt twice, for logging and back to gondolas again. These attractive vehicles can be seen on the RhB-track all days.
