

## Novelties Presentation Carriages for Containers / Swap Bodies

The Rhaetian Railway has a high-capacity rail network with modern freight trains. While in the past, single goods were the main cargo, nowadays a lot of freight is transported in standardized containers. Containers and swap bodies largely determine the appearance of the trains.

Read all about our latest vehicles.

Yours AB-Modell-Team

The new wagons look good on the manufacturer's photo diorama, but are also a daily part of the RhB's network of transport services and should be used on every Nm-layout.

**Nm-019.0:** RhB Sbk-v 7701, Tragwagen für ISO-Norm-Wechselbehälter oder 20'-Container, Metallmodell für Nm (6,5mm)

### Tragwagen Sbk-v 7701 ff. Nm-019.0

Art.-Nr./item-no./produit-no.

four-axled carriage

several road-numbers available

unloaded model for standard 20' containers and swap bodies

handcrafted model from nickel silver

supplemented with 3D-printed parts

exact to scale 1:160

executable on 6.5mm narrow gauge tracks only

**NOVELTY 2018**

The wagon is completely new developed. The model made of nickel silver is assembled by us from approximately 30 individual parts which are usually soldered, in order to achieve an optimum weight and maximum stability. The model is supplemented with a few 3D printing parts and a fine lettering by the means of decals to perfect the total optical impression.

Low-friction bogies and metal wheelsets ensure excellent running. Equipped with the MTL coupling, the model can be coupled with all previous handcrafted models of our house and most other vendors.

You can choose between the unloaded vehicle and a number of models with containers or swap bodies.

The first series of these vehicles was put into service by the Rhaetian Railway in 1999 and has a maximum capacity of 24 tons. It can be loaded with 20 foot standard containers or swap bodies.

Due to the low construction, the clearance gauge is maintained even on the curvy Bernina line.

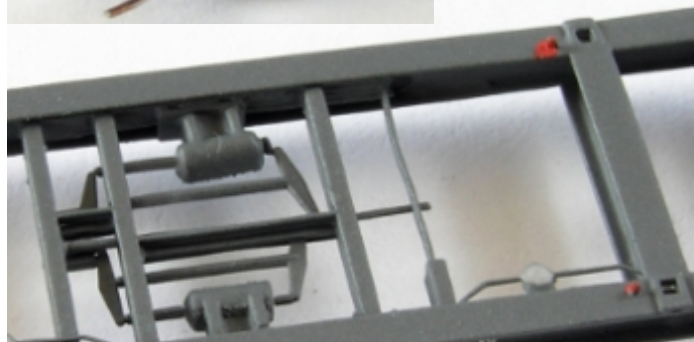

In addition to the well-known supermarket chains Aldi Suisse and Coop, Swiss Post also uses RhB's transport services.

Of course it is possible, to load your own containers on the carriage.

The handcrafted model is characterized by many fine details:

- Replica of trunnions and container straps
- Replica of hoses and heating cable
- Inscription of the blackboard and the front wall
- Free view of the bogies
- Low-friction bogies with metal wheelsets
- Detailed replica of the brake system
- Freestanding handwheels
- separately coloured details
- MicroTrains-couplers for Nm

## Combined Traffic

Combined traffic on road-rail-ship

- Worth knowing about the transport containers -

In normal language, the transport containers are generally referred to as containers. However, there are some important differences that we will briefly discuss here.

Containers are classic metal boxes whose dimensions are standardized, which can be stacked and require a crane device for reloading. Usually, large quantities are transported by ship, distributed by rail and distributed by truck. Container is probably the best known transport container and has become naturalized as a collective term.

ACTS roll-off containers, on the other hand, are normalized only in relation to the base, can be taken up by a truck with a crane hook and placed on the ground or on a freight car equipped with runways, if necessary. The often referred to as Abrollmulden container do not fit on the Sbk-v carriage.

Swap bodies similar to the containers have standardized distances for the pins to secure the container, but different lengths. Most of these boxes have fold-out legs that allow you to drive a truck under the swap body. To reload on a railway carriage, a crane is needed.

As a rule, neither ACTS containers nor swap bodies are stackable.

## Hints For Use

The handcrafted models require a minimum radius of 195mm for safe operation on your system. Smaller radii are not possible! Be sure to avoid kinks and sharp declines in the track, otherwise the long vehicles may derail.

The fine stage railings bend very quickly when touched, so you should always touch the model on the vehicle frame.

Own loads can be easily attached to the model. Unless you want to fix the container with a removable adhesive, simply stick a small neodymium magnet under the container floor. An iron strip in the model ensures a secure hold.

## Delivery Dates

The pre-ordered models will be produced in October and will be sent to customers after completion, after prior contact.

New orders will be accepted and subject to the delivery times, which we will inform you on the order confirmation. Plastic containers are available at short notice from stock (September 2018), as long as stock lasts.

## Prices

The prices valid at the time of publication of our newsletter are in the left column.

Pre-orders will be accepted until 31.10.2018 (incoming or postmarked) at a reduced special price.

Reservations which are already made are confirmed to the customer at short notice at the pre-order price. In addition, each customer will receive a plastic container (depending on availability) free of charge (early bird discount).

Current prices are published on our website.

We will also keep you updated on new developments there. On request, we also take you to our newsletter for the novelties (by eMail).
